What do we know about child oncology?

- It is uncontrolled proliferation of cells anywhere in the body.
- There is a chance of 70% improvement with early treatment
- Healthy eating is the biggest way of protection.
- Symptoms are: frequent fever, weakness, bruise and bruise on the bone pain bleeding in the teeth imbalance teeth
- Pediatric oncology treatment is administered by oncology nurses under the supervision of an oncologist in the oncology department.
- Treatment is also investigated by looking at the age of the patient, the type of the disease, and the effects on the environment.
- Cancer of childhood is not inherited 95% of the disease occurs spontaneously.
- Oncology patients' disease is not contagious.
- KEEPING THEM HAPPY is the biggest treatment.

RÜMEYSA DEMİR

One Day...

One day... We were with them... It was just an English project at the very beginning...but we wanted to experience something real, something precious, something heartfelt. We visited Child Oncology service to touch their little hearts. It is impossible to express it in words. Would you like to feel what we feel?

Maybe, it was the most beautiful experience in my life.

It is better to share their story than looking at them and giving thanks.

We tried to touch their hearts in this fight. I don't have the words that can describe the happiness of touching a child's heart. We couldn't stay for hours, but the chairs we took beside them and 3 or 5 happy balloons made them smile. It is one of the most beautiful feelings I have ever had in my life. To be the smile on a child's face to make them smile, to make them happy, to be their sisters & brothers, to be a friend, to be a hero... It is so simple but precious. LAUGHTER IS NOT CAPTURED UNDER THE MASKS. We are looking forward to seeing the days when we will hear their laughs. They don't care about your language religion or ethnicity... They need happiness more than everything else. How invaluable it is to make their hopes bigger. Thanks God, we have children in our world. **TUĞÇE KARADENİZ**

The feelings I had do not actually have any description.

I experienced the most intense of emotions today. Being a reason for a little smile on those little faces is the most beautiful thing that can make everybody happy. Please go to Oncology services and spend time with the children. That smile is worth everything both for them and for their family.

HÜSNEGÜL KILIÇ

Visiting pediatric oncology is a different experience and happiness for me. At first, children who were acting shy gradually became involved in the activity, creating an impressive environment. Seeing the happiness in the eyes of the children and watching the changing of the environments, gave me nice feelings step by step.

ALPER TALHA KARAGÖZ

Special thanks to Mustafa Süleyman Yolbir for his support.

GUINNES HEALTH RECORDS

Bernd Schmidt
He can open his mouth around 9 cm. He can eat big size hamburger at one time without having any difficulty

Paddy Doyle
He can do 1868 push-ups with one hand in an hour.

Vijay Kumar

Maxwell Day
A British man can rotate both his feet by 157 degrees.

Devendra Suthar
He has got 28 fingers!

Kim Goodman
She can stick her eyes out (122mm) She renewed her latest record.

Sultan Kösen
He is the tallest man in the world, his height is 2 meters and 51 cm.

BETTER TREATMENT, BETTER HEALTH

"Better health is not a scientific problem, it is consciousness raising problem"

These days, people are talking about illnesses more than a healthy life. Therefore, people have nearly forgotten what healthy life really means. Rather than focusing on sicknesses and their treatments, they should focus on better health. However, of course we need medicine if we are already ill. In this case, it is a good idea to make medicine look better.

How should treatments & medicines look better?

For example:

1. Medicines should include positive mottos rather than negatively connotated sentences.
 2. They can use some emoticons like smile or happy faces.
 3. Finally, they should have pictures which show a healthy life is on the way.
- Those ideas can be effective because they have positive effects on people's psychology and people will take their medicine on time with these changes. Briefly, in this way, patients may get their beloved health back and they will make an effort for healthy life.

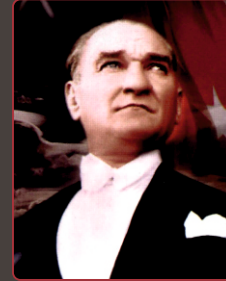

YYLDYZ DOVRANOVA

BODY WORLD

An exhibition where real human bodies can be traced anatomically, physiologically and medically by a method called plasticization You have not heard it wrong ! All bodies in the exhibition are real people !

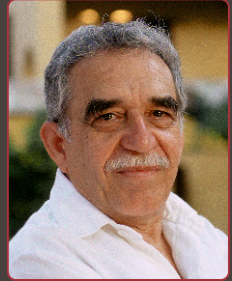

What did THEY say?

Mustafa Kemal Atatürk

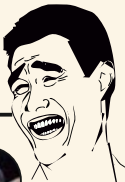

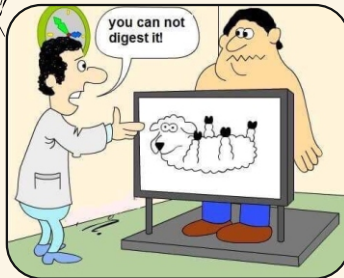

A healthy mind in healthy body.

Gabriel Garcia Maroquez

No medicine cures what happines cannot
